AMP NEV

Our goals and what we're doing to achieve them

Goal: A reverse in the decline of all Goal: A comprehensive up-to-date livestock breeds on the Watchlist

What: We aim to have all the breeds on the Watchlist stable by 2028

How:

- We are refocusing our messaging showing the economic, social and environmental relevance of native breeds.
- We use the latest technology to save our rarest breeds, as with the British Lop Pig Project. What we learn from this project will be applied to the benefit of other breeds.
- We will continue to equip breeders and potential breeders with the knowledge they need to keep animals through our Grazing Animals Project courses and online resources.
- We are identifying 'Priority Breeds' and creating Conservation Plans for each of them.

Gene Bank

What: The RBST Gene Bank is the charity's single biggest investment and a key national asset. We will work towards making this a National Gene Bank, supported by government

How:

- We are implementing a clear strategy which will support the maintenance and acquisition of animals to ensure the future of our native breeds.
- We need to ensure that the original genetics are preserved and can be drawn on in the future.
- We are actively promoting the importance of the Gene Bank to potential donors and funders and will ensure that its importance is widely understood.

Goal: Livestock genetic diversity recognised by government and wider society as a fundamental element of agricultural and biodiversity policy

> What: We lobby for genetic diversity to be recognised in government policies such as the Agriculture Act, Rural Development Policy and **Biodiversity Policy**

How:

- We are joining formal partnerships and networks to highlight the many benefits of our native breeds.
- Our strategic work will build on our good media profile to ensure that native breeds are recognised in policy as being crucial to bringing greater sustainability to modern farming and land management practices.
- Our volunteer network represents us at shows and highlights the range of rare breeds that exist and their many and varied uses to the public.

A message from our Chairman

John Atkinson Chairman

I was honoured to be elected RBST Chair after the 2021 AGM, taking over from Gail Sprake, and am now working with my fellow Trustees, staff and our dedicated volunteers throughout the UK to ensure the Trust's activity is making the greatest positive impact for the future of our wonderful rare and native breeds of livestock and equines.

As a Cumbrian livestock farmer, with a business based on native breeds, ensuring they thrive is essential for me. With growing consumer interest in provenance of food and an increasing focus on the environmental impacts of farming and land management, the agricultural landscape is changing. Alongside the move from CAP to payment based on public goods and the massive increase in input costs, RBST has a golden opportunity to show why native breeds can and should play a major role in a sustainable future for food, farming and the environment. For a long time agriculture has focused squarely on volume production, but the current shift towards greater consideration of the cost of inputs and wages is shining a light on the commercial attraction of native livestock breeds.

As Chairman I am determined the RBST should become ever more focussed on showcasing why our native breeds of livestock and equines matter, and how we can work for their survival long into the future. For example, when I took part in some bench-marking analysis locally, our business came out well when we looked at the gross margins, but it jumped into the top five when we added in unpaid labour and fixed costs. Native breeds have been bred for centuries to live and thrive in our environment with little input; we can use these attributes to provide a much more sustainable future for British agriculture.

Covid may have limited our ability to meet people face-to-face in 2021, but we have more than made up for it through our use of the media. I have been delighted by the number of mentions of RBST making the case for native breeds I see in the farming, national and regional press, I am sure this is partly why we are seeing more enquires for native breeds from farmers and estate managers looking for a more sustainable business model. We have also been devoting time to making the case in Westminster for native breeds and the devolved administrations. With each of the UK countries drafting new agriculture policies RBST has a once-in-a-generation opportunity to secure

government support for the breeds. Spending hours on Zoom and Teams meetings can be a bit tedious, but it's vital that we have input into the new agricultural vision being developed within government.

The more strategic approach RBST adopted for its breed conservation work in 2021 is paying off too. With the new Watchlist methodology, which takes account of the level of inbreeding and other relevant factors, alongside the numbers of animals, we are much better placed to identify the specific challenges facing the breeds and what needs to be done to put things right.

I have been impressed by the extent to which RBST members have stepped up to help extend our influence at a local and regional level. RBST's Scottish Forum has done wonders in achieving its stated aim for "improving RBST's influence in Scotland, and Scotland's influence in RBST". The new Young RBST, set up to provide a forum for younger members to engage with one another should help secure the next generation of RBST and give a voice for our younger members.

If you are a long standing member you will be pleased to see that 2021 saw significant improvements in RBST's financial internal administration. Income was up 13% on the previous year and, as a direct result of our significantly improved budgeting and cost control, notwithstanding the improved operational delivery, total spend has declined to its lowest level since before 2018,

Finally though, everything comes down to people, and I have been delighted to have such an extremely supportive Patron, an engaged and articulate board of trustees, an incredibly able and hardworking staff team and so many loyal and enthusiastic support groups and members. I was particularly delighted that 2021 saw Baroness (Sue) Hayman of Ullock agree to become our new President. I want to conclude by giving them all my deepest thanks.

A message from our Chief Executive Officer

In 2020 RBST produced its first comprehensive conservation strategy. 2021 saw us roll it out.

The strategy has three parts, and the details are set out on page 9. Firstly, we promote the reasons for which the animals were initially bred, whether to provide food, fibre or transport; secondly, we lobby for government to invest in the public benefits provided by the breeds; and thirdly, where there is a clear need, RBST will carry out its own bespoke conservation projects.

2021 saw us make significant headway in promoting the benefits of native breeds and their produce to both farmers and consumers, as shown by the wonderful coverage we secured in the agricultural, national and local media.

We need to be making it easier to keep native breeds. In particular we need a network capable of processing small numbers of non-standard animals to the highest welfare standards. So we've been working hard through the newly formed Abattoir Sector Group to alert Government to the plight of the small sector calling on it to take steps to address the challenges.

As the UK leaves the EU and the CAP, we are working with Defra and, increasingly, the devolved governments in Scotland, Wales and Northern Ireland to ensure that our native breeds are properly supported under the new agricultural policies. It's going slowly, and it will be a few more years before the final decisions are made, but we are in there making the case.

Finally, there are those breeds that will struggle to be viable commercially and whose situation is such that they will not benefit from Government support. 2021 was the first year in which we used the new methodology for compiling the Watchlist, taking account of the level of inbreeding as well as population numbers. This meant that we could have a much better understanding of the breeds under threat, and what steps were needed to turn things around.

We would not be able to achieve nearly so much unless RBST itself was being run in a professional and business-like way. 2021 saw RBST implement its first fully costed 5 Year Business Strategy. This, together with proper budgeting and financial controls, means that the organisation is now being run as efficiently and effectively as it should be. We work out what we need to do, and how we can pay for it.

And as Director of Finance Claire McNicol makes clear, all this means we are making the best use of the money we raise.

Of course, we cannot do everything ourselves. RBST depends on its members to get things done, some as individuals, some as members of Support Groups – the groups set up by the board to help RBST deliver its objectives.

I recognise that changing the way we do things has been a challenge for some Groups, but I've been delighted by the extent to which so many have stepped up and looked at new ways of delivering for both RBST and the breeds.

RBST Scotland has shown itself to be particularly dynamic, running both physical and online events to raise the profile of native breeds north of the border. In the coming months I hope we will see similar levels of activity in Wales and Northern Ireland.

In response to demands from younger members we set up Young RBST, a group for members aged up to 35 wanting a network of like-minded breeders keen to find new ways of doing things. You can read more about them on page 24.

When it comes to working with individual breeds, we depend to a significant extent on the support and engagement of the relevant breed society. Without them many of the specific projects mentioned in this report would be difficult if not impossible.

So huge thanks to everyone involved: trustees, members and, in particular, our wonderful staff team: Claire McNicol, Tom Blunt, Andrea Parry Jones, Jo Linford, Rachel Peckover, Jean Henderson and Hilary Young, and our two communications advisers Linda Trotman and Isobel Davidson.

Christopher Price CEO

A message from our Director of Finance and Operations

2021 was yet another year of considerable success for RBST. The time and effort spent addressing financial and procedural controls has paid dividends and RBST now has a strong, stable foundation from which to focus its time and resources on delivering leading conservation.

That said, we find ourselves continuing to be in a period of economic turmoil. The impacts of Covid still weighed on 2021 and as we have entered 2022, inflation and global supply pressures have made the financial management of any organisation all the more critical to its survival.

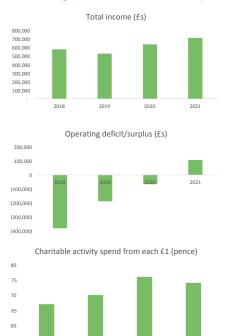

From an income perspective 2021 was a strong year for RBST with total income up 12.1% and at its highest level since before 2018. Whilst RBST's membership income remained broadly in line with 2020 and 2019, the efforts to diversify income sources has begun to pay off. One of the most important and defining features of RBST as a charity is that we are a membership organisation. The breadth and depth of that network, with years of experience and rich knowledge that our members bring, will always be one of our most cherished assets. However, we do need to recognise that the environment within the charitable sector, particularly in regard to membership, is a challenging one. Management continues to target an increase in membership numbers, whilst recognising the need to insure against a difficult backdrop and ensure RBST is not overly dependent on membership income. Further work to continue this diversification is ongoing.

Following the introduction of the strategic conservation plan RBST has be able to focus its time and money on the areas of greatest concern, ensuring that the breeds most in need are prioritised and both staff time, funding applications and other resources target the areas most in need, thus generating the most impact. As well as breed specific projects, RBST has also embarked upon overarching conservation projects to ensure we are at the forefront of leading scientific research to guarantee RBST's messages, regarding our breeds and their place in government policy considerations, climate change debates, ecological and biodiversity improvements and sustainable food, are heard by the public and relevant audiences with decision making power. All this was done whilst continuing to focus on managing expenditure. Notwithstanding our improved operational delivery, total spend has declined to its lowest level since before 2018, from both a total perspective and an unrestricted perspective.

In addition, RBST has replenished its restricted funds through considered and targeted grant applications and we are poised to increase our conservation spending over the coming years, while continuing to ensure projects are properly budgeted for and deliver the most amount of impact for each pound we raise and each pound we spend.

The overall impact of RBST's increased income and decreased expenditure can be seen clearly through the improvements in the operating surplus, which is once more a surplus and no longer a deficit. RBST's detailed budgeting and planning process takes into account the long-term, average performance of items such as legacies, as well as investment gains, to ensure whilst there may be fluctuations in operating performance from year to year, on a long term basis the Trust is working to a sustainable level of activity.

The final thing left for me to say is that none of this would have been possible without a fantastic staff team, who work tirelessly to deliver the objectives of the charity and all those we partner with, from our wonderful members, to fantastic corporate supporters, to those who so generously chose to remember RBST in their will. Our sincerest thanks to you all, we simply could not do it without you.

Claire McNicolDirector of Finance & Operations

Conservation Strategy We overwise The presentation of the present

out its first comprehensive conservation strategy. The aim is to ensure all its resources, both time and money, are being used efficiently and effectively to secure the best results for our native livestock and equines.

The strategy has three parts. Firstly, we promote the reasons for which the animals were initially bred, whether to provide food, fibre or transport; secondly, we lobby for government to invest in the public benefits provided by the breeds; and thirdly where there is a clear need, RBST will carry out its own bespoke conservation projects.

Commercial opportunities

Our native breeds were bred for particular commercial purposes, to meet human needs, whether that be the production of meat, wool, milk, or eggs or to provide practical services such as grazing or transportation.

As the UK leaves the EU, and farmers face an unsubsidised, more market-facing world in which people are increasingly concerned about the provenance of their food and its environmental impact, niche, low input products with a good story to tell, like native breed meat, will become more attractive to consumers.

With a view to bringing home the commercial benefits of keeping native breeds to farmers and smallholders, we carried out our first ever commercial survey of people already keeping native breeds to demonstrate they can form the basis of a viable business.

We built on this through a series of media initiatives, promoting native breed products and the wider benefits they provide.

The role of Government

Removing obstacles

We have continued to work hard alerting Government to the plight of the small abattoir sector, and we are now working through the newly formed Abattoir Sector Group. The decline in the number of small local abattoirs capable of dealing with native breeds is a major concern. Government needs to make one off investment to ensure the remaining small abattoirs are "match fit" for the unsubsidised more market-facing world. Where the abattoirs have disappeared, the investment needs to be in mobile or temporary units.

Public support

We are working with Defra in England and the Devolved Administrations in Scotland Wales and Northern Ireland on the new post Brexit agricultural support schemes that replace the CAP. We have two specific objectives. Firstly, a shift to the sort of extensive low input farming systems that encourage the keeping of native breeds and secondly specific policies to support the most threatened native breeds. Progress is slow, the scale of change envisaged, particularly in England, is significant, but we continue to make the case.

RBST's own projects

Finally, there are those breeds that will struggle to be viable commercially, and whose situation is such that they will not benefit from Government support.

The revised Watchlist methodology announced in 2020 which takes account of the level of inbreeding as well as population size, has made it easier to identify both those breeds facing the greatest challenges and what needs to be done to improve their fortunes. For example, the 2021 Watchlist highlighted the plight of Gloucester cattle and we are now working with the breed society on a strategy to address the challenges.

Promoting Freeds

The commercial picture for native breeds

An online survey carried out by RBST in 2021 revealed that farmers and smallholders who sell rare and native breed products and services can obtain a premium price while spending less on input costs in relation to continental breeds.

However, the survey also found that the lack of suitable abattoirs is seen as a key barrier to future business growth.

RBST undertook the survey to examine commercial trends with rare and native breed livestock and equines. It revealed that:

- 49% of respondents sell their rare or native breed products for a higher price than continental alternatives, while 43% said they sell it for the same price and 8% said they sell it for a lower price.
- Of those who keep both native and continental breeds, or who have switched from continental breeds to native breeds, 71% thought that overall costs with native breeds were lower than with continental breeds. The main cost differences related to feed and supplements, the type of land required, housing/shelter, and veterinary costs.
- 38% of respondents said that the commercial potential of offering a superior product was one of the reasons why they chose a native breed, and 36% said lower input costs was a reason for their native breed choice.
- 42% of respondents warned that 'lack of suitable abattoir' is one of their top three greatest barriers to growing their rare breed business.

These results show that there is a breadth of opportunity for those keeping native breeds of livestock and equines, with commercial activity deriving from meat, wool, breeding stock and dairy with the addition of conservation grazing, hides and horns, and more.

However, the results also show very clearly the need for urgent action on the other key barrier for rare breed businesses looking to grow – access to suitable abattoirs. RBST is campaigning for Government to commit to the support and collaboration which will help reverse the decline of the local abattoir network.

Survey results:

LONGEVITY: 51% of respondents have been operating their rare or native breed business for more than 10 years, and 27% for more than 20 years.

INCREASED TURNOVER: 59% of respondents saw the turnover of their rare or native breed business increase in the previous five years, with another 27% saying it had stayed the same. 13% said turnover has increased by more than 50% over the last 5 years.

INVESTMENT: 86% of respondents had made investments in their rare or a native breed business in the previous five years. 22% had made investments of more than £10,000, and 73% were planning to make investments in their business over the next 5 years.

FUTURE GROWTH OPPORTUNITIES:

Respondents saw the following as the greatest opportunities for growing their rare breed businesses: increased consumer concern for the environment and animal welfare (66%); consumers re-connecting with local businesses and valuing local provenance of products (61%); growing consumer preference for quality of meat (56%); ELM and public payment for native breed conservation work (29%)

BARRIERS TO GROWTH: Respondents saw two factors being the greatest barriers to growing their rare breed business: consumers unwilling to spend more for high quality or high standards (48%); lack of suitable abattoir (42%).

GO NATIVE: The top five reasons for choosing rare/native breeds were:

- To support the breed's survival (85%)
- To support the natural environment (56%)
- To maintain local heritage (43%)
- Commercial potential of superior product (38%)
- Lower input costs (36%)

23% of respondents keep both continental and native breeds, while 11% have switched from native to continental. 66% chose only native breeds from the start.

LOWER INPUT COSTS: Of all respondents, 64% thought that overall costs with native breeds were lower than with continental breeds. This compares with 6% who thought native breed costs were higher and 16% who thought costs were the same.

Of those who keep both native and continental breeds, or who have switched from continental breeds to native breeds, 71% thought that overall costs with native breeds were lower than with continental breeds.

SELLING FOR A PREMIUM: 49% of respondents sell their native/rare breed meat for a higher price than continental alternatives, 43% for the same price, 8% for a lower price. The top 5 selling points for native or rare breed meat were: taste (76%); local produce (66%); supporting a rare breed's survival (61%); environmental sustainability (56%); animal welfare (53%).

The results are taken from the responses to the RBST Commercial Trends survey conducted in July 2021 with 259 farmers and smallholders who sell rare or native breed products or services taking part.

Promoting :

GPS-tracked native breed cattle move in to bring conservation boost to ancient Epping Forest

In a project run by the City of London Corporation and RBST, Native English Longhorn cattle fitted with state-of-the-art GPS collars have been moved into parts of Epping Forest and its accompanying Buffer Lands, some 8,000 acres in total, where livestock has been absent for more than a century. The native breed's reintroduction to these parts of the Forest is designed to bring ecological revival to ancient woodland through Conservation Grazing. Epping Forest is one the largest tracts of land in the UK to seek conservation benefits through Fenceless Grazing and has been a pioneer of fenceless grazing in the UK for the past 10 years.

The significant extension of Conservation Grazing is being enabled following successful trials of the GPS collars at Epping Forest in 2020. The collars allow flexible and scalable landscape management through cattle tracking and containment using Geofences and Nofence Grazing technology without the need for physical fencing. When an animal crosses the Geofence zone, it gets an audio warning prompting it to return back towards the herd to turn off the sound. If it keeps going out of the zone, it receives a low-level pulse. This is a high animal welfare approach using a lower level pulse than an electric fence. The cattle adapt to the system quickly and their welfare is monitored carefully.

As a native breed with a thrifty, hardy nature and which evolved in our native landscapes, English Longhorn cattle are ideal for Conservation Grazing to improve habitats and promote biodiversity. The breed became rare and was listed on the RBST's first Watchlist in 1976, but thanks to renewed appreciation for the quality of its beef and placid temperament, English Longhorn numbers have seen an impressive recovery in more recent times. This recovery is now being supported by growing recognition of native breeds' importance for Conservation Grazing.

RBST Chief Executive Christopher Price said: "Over centuries our native breeds of cattle adapted to the habitats around them, and in turn their natural activity helped forge the landscapes and environments of the UK. English Longhorns are an ideal choice for No Fence Grazing at Epping Forest and I look forward to seeing the results of their work over the coming months and long into the future. This approach is well suited to supporting the environmental revival of large habitats, and I anticipate we will soon see other land management authorities and landed estates adopting this exciting technology."

Epping Forest is an immensely important wood-pasture site, one of the largest in the UK and of recognised international importance. It is hoped Conservation Grazing with English Longhorns will bring back lost structure and complexity of the wood-pasture and allow a large number of species to be supported including a range of scarce species in the Forest and local region such as Lousewort, Heather and Cross Leafed Heath.

Epping Forest was grazed by free roaming cattle, ponies and other animals for over 1,000 years but this declined dramatically in the 20th Century. Grazing was reintroduced by the Epping Forest charity to small areas of the Forest in 2002, and the impacts of the animals has allowed habitat and diversity of vegetation to flourish at those sites. The GPS collars are designed to enable precise and flexible grazing that allows sites to be grazed without or in conjunction with physical fencing. It also allows a more scientific approach to data collection and assessment, enhancing understanding of how grazing shapes habitats and influences species distribution.

RBST Borders Group at COP26

RBST is playing its part in promoting the role of native livestock in addressing the challenges of climate change.

RBST Borders Support Group helped promote the role of rare breeds in sustainable farming at the UN Climate Change Conference - COP26 – held in Glasgow in November 2021.

The Group was invited to provide sheep as an exhibit in an event for pastoral farmers. The invitation came via a contact of RBST Chairman John Atkinson and Borders Group Secretary Zoe Burn took on co-ordination of the organisational challenge at short notice. This involved arranging everything from risk assessments, to location, to Animal Health permits and the go-ahead to have the sheep there was only received the day before the event after the application went all the way to the top for Scottish Government approval.

As farmers from all around the world were attending, the Group saw this as a good opportunity to promote RBST and the work it does in the UK. After a call to Fernando Garcia-Dory, Regional Coordinator of the World Alliance of Mobile Indigenous Peoples – WAMIP, Zoe put out an email to members to ask if anyone would be interested in attending the event with sheep, or sheep produce, to promote the use of non-intensive farming for a sustainable future, and try to change the narrative of livestock being a major cause of environmental degradation.

Gordon Johnson from Biggar volunteered to take four horned Hebridean to the sheep and his wife Juliet prepared a hogget stew and home-baked wholemeal loaves for the event. The exhibit received many visitors and Gordon answered a lot of questions from attendees and participated in press interviews.

Benjamin Mutambukah, Fernando Garcia-Dory and Hijaba Ykhanbai of WAMIP.

Growth for farm parks network

Since its inception, RBST has been associated with farm parks. Founder Chairman Joe Henson had started opening his farm gates to the public in 1971 so that the growing collection of rare breeds that his family had amassed at Bemborough could help pay their way. When RBST was launched in 1973, the Cotswold Farm Park was already proving that rare breeds could attract the interest of the general public when displayed in a farm setting and the first RBST Council agreed to encourage the establishment of farm parks around the country, ultimately introducing its approved farm park scheme.

The defining features of RBST approved farm parks have been their active breeding groups of Watchlist breeds and the fact that they are open to the public. They are a diverse group, varying in size and style. Some are council owned, some charity and others are privately owned. Together they provide a shop window for RBST, giving the general public the chance to meet and learn about our native breeds.

Following the introduction of a new farm park structure in 2020, the network saw substantial growth in 2021, which included the addition of the first two establishments in the Educational category. With RBST accreditation regarded as an important endorsement of farm parks' role in preserving and showcasing rare breeds, there is a growing number of parks seeking to join the network.

New Farm Parks in 2021

Jimmy's Farm & Wildlife Park,

situated just outside Ipswich, became the first Associate member of the RBST farm park network. The park, which already held official zoo status, is a centre for the conservation of both native livestock breeds and rare and exotic wildlife, with over 80 species and breeds on site.

Jimmy Doherty originally founded the Essex Pig Company out of a vision of using traditional, free-range meat production practices rearing British rare breeds – and, in fact, the business still trades under that name. While they now share the stage with a wide range of wild animals, the native livestock breeds remain an essential part of Jimmy's Farm and its team manages a number of breeding programmes.

Pigs formed the foundation of Jimmy's Farm and remain an important element of the working farm, which is home to Large Blacks, British Saddlebacks, Middle Whites, Tamworths, Gloucestershire Old Spots, and Oxford Sandy and Blacks.

Other species include British White, Riggit Galloway and Highland cattle, Bagot and Golden Guernsey goats, Embden geese, Buff Orpington chickens and two Suffolk mares.

Chatsworth Farmyard continued a

long-established relationship between Chatsworth in Derbyshire and RBST. The farmyard at Chatsworth in Derbyshire has provided agricultural education and entertainment for almost half a century. It is a collection of small yards and buildings designed to tell the story of estate farming and sits alongside the broader Chatsworth estate.

Deborah, the late Dowager Duchess of Devonshire, was a longstanding supporter of RBST who brought a unique brand of enthusiasm to her service as both a Vice President and later President of the Trust. She was a great advocate for RBST's cause and an effective ambassador for livestock conservation. She linked this with a burning desire to educate people about "good food and good farming". She was particularly fond of her poultry and thrilled to receive a trio of rare Derbyshire Redcaps as a gift from RBST Patron HRH The Prince Charles.

Since joining the RBST network, Chatsworth has increased its inventory of registered pedigree rare breeds with Bagot goats, agisted Landrace gilts and the RBST-owned Eriskay mare Linton Linnet and her foal Survival Lizzie. The Farmyard's Suffolk mare foaled in 2021 and there are also registered Gloucestershire Old Spots in residence.

The cattle breed of choice at Capel Manor College is the Red Poll, the herd having been established around 10 years ago. Sheep breeds include Lincoln Longwool, Norfolk Horn, Boreray, Manx Loaghtan and Jacobs. Pig breeds include Berkshire, Tamworth and Oxford Sandy and Black.

Forty Hill Farm has very varied grazing, which lends itself to native breeds and as well as grazing its own land, the college is involved in a number of conservation grazing projects, including one for the Hertfordshire and Middlesex Wildlife Trust, where grazing pigs have helped create the ideal environment for wading birds. The College's Red Polls have also been used on a nature reserve in Essex where their natural grazing techniques have helped improve land that was overgrown with long grass and shrubs.

Melsop Farm Park is a family-run farm park in Norfolk, opened by Keith and Sue Stone in 2002 with day-to-day management now in the hands of son Jordan.

An important element of Melsop's stocking policy is the inclusion of breeds local to Norfolk, including Norfolk Horn sheep, Norfolk Black turkeys and what is thought to be the UK's largest breeding group of Norfolk Grey chickens. The farm park is also playing an important role in increasing the effort to improve the geographic distribution of some of RBST's highest priority breeds, such as the Gloucester and Albion cattle.

Melsop is also home to Belted Galloway cattle, Middle White, Tamworth and Berkshire pigs and Golden Guernsey and Bagot goats. Sheep breeds include the local Norfolk Horns plus Ryeland, Leicester Longwool, Grey Face Dartmoor, Balwen, Castlemilk Moorit, North Ronaldsay, Boreray and Jacob and there is also an impressive range of poultry and waterfowl.

Tom's Farm is located in the London Borough of Wandsworth and is part of Nightingale Community Academy, a school for boys aged 5-19 with social, emotional and mental health needs, and also works with a variety of schools in the wider community. The farm utilises its work to support the conservation of rare and native breeds of livestock both as a tool for land-based and animal care qualifications as well as a therapy resource for young people. It offers a field-to-fork educational experience for students, parents, staff and the wider community aimed at reconnecting people with farming and the origins of their food.

Tom's Farm is home to a number of 'Priority' and 'At Risk' rare breeds including Border Leicester sheep, Derbyshire Gritstone sheep, Oxford Sandy & Black pigs, Golden Guernsey goats, Bagot goats, and Norfolk Black turkeys. Other native breeds cared for at the farm include Shetland ponies, Welsh ponies, and Shetland and Southdown sheep. Tom's Farm works with other school farms and rare breed farm parks including Jimmy's Farm and Hadleigh Farm, and it is currently running a UK-wide breeding and education programme supporting rare breed Oxford Sandy and Black pigs.

Promoting our native breeds

The 2021 Marsh Award

> The 2021 RBST Marsh Awards for unsung heroes went to three people who have made significant contributions to the work of RBST.

in Genetic Bio-Diversity went to Professor Stephen Hall, the Lifetime Achievement Award to Gail Sprake and Support

Group Volunteer 2021 was Helen Wray of RBST Dales.

Gail Sprake stepped down from the role of RBST Chairman at the 2021 AGM, after eight years in the position. Gail first became an RBST Trustee in 2011 and, with her husband Michael, has been a member of RBST since the mid-1980s. She is a long-standing member of the East Anglia Support Group, for which she acts as secretary, and is heavily involved in all of their activities. She has been unswerving in her championing of the RBST cause for many years, and has been instrumental in the Trust taking advantage of the changes in the political landscape following Brexit. As Chairman, she travelled the length and breadth of the country to promote RBST and has been unstinting in her support of the management team and fellow Trustees.

Helen Wray has been a member of the Dales Support Group

Gail Sprake

for a number of years and was elected as its Chairman at the beginning of 2021. Helen's Support Group Volunteer award reflects the work she has done to revive the Group with a wide range of activities in support of RBST.

Helen farms at Gam Farm at Grassington, near Skipton in North Yorkshire and is a dedicated champion for rare breeds, farming a wide range of livestock including 180 Whitefaced Woodland sheep and 50 Northern Dairy Shorthorn cattle, as well as Wensleydale sheep, Bagot goats and Tamworth and Middle White pigs. She is also involved in the Poultry Project, with breeding groups of Marsh Daisy chickens.

Professor Stephen Hall is a long-standing and active supporter of RBST. He is an Emeritus Professor of Animal Science at the University of and has served on the UK Government's Farm Animal Genetic Resources Committee. He has a particular interest in native breeds of livestock and has been involved in research into rare breeds since his student project on the seaweed-eating sheep of North Ronaldsay in 1973. He is currently a Trustee of the Chillingham Wild Cattle Association. Stephen joined RBST in 1977 and in 2002 was co-opted onto the Trust's Council. He is a member of RBST's Expert Advisory Panel and during the 2021 review of the RBST Watchlist methodology, his experience and expertise was particularly invaluable.

Securing Engrent

As the UK leaves the EU agriculture will be changing, and in each of the four home nations, RBST is working with the government to ensure that policies to address the needs of our native livestock and equines are properly recognised and addressed in the new policies.

Removing obstacles

RBST has long recognised that the lack of a comprehensive network of abattoirs able to process small numbers of non-standard animals to the highest welfare standards and returning the fifth quarter is one of the biggest obstacles to keeping native livestock.

Government needs to make one off investment to ensure the remaining small abattoirs are "match fit" for the unsubsidised more market-facing world. Where the abattoirs have disappeared, the investment needs to be in mobile or temporary units. In addition, Government and the FSA must commit to regulation that is proportionate whilst compatible with the maintenance of standards.

In 2020 together with allies in the Sustainable Food Trust and The Craft Butchers Association, we established the Abattoir Sector Group; an alliance intended to make the case for small local abattoirs as widely as possible.

The Group has proved a game changer; all four governments

at last accept that the abattoir situation is one that needs to be addressed. As a result of the research the Group has carried out and the information it has been able to provide, in 2021 the agenda shifted to looking at how the situation should be improved, not whether it needs to be.

Ensuring public support

Native breeds do not just provide benefits for their owners, they benefit everyone.

To ensure all these benefits are recognised, RBST is lobbying on two fronts, first for a shift to the sort of extensive low input farming systems that encourage the keeping of native breeds. Thankfully Defra in England is supportive of this approach, and we are making headway. The devolved administrations are at an earlier stage of policy development, and progress is slow, but we are engaged and pressing the agenda.

Secondly, we are calling for specific policies to directly support the most threatened native breeds. This requires recognition of the importance of the breeds themselves, as part of biodiversity, and of the various benefits they provide.

Native breeds play an important role in the development and maintenance of natural habitats and increasing biodiversity. Bred for our landscape, native-breed cattle helped create the pastures and meadows we now cherish; native pigs can be used in woodland management to increase biodiversity and play a key role in arable rotations. We need incentives to encourage farmers and other land managers to use them in preference to larger commercial breeds.

Then there is the cultural side; native breeds are part of our national identity and heritage. Many say White Park cattle, featured in the Rare Breeds Survival Trust logo, were brought to Britain when it was still joined to the European mainland – well before Stonehenge was built. The Large White pig is the cornerstone of pig breeding across the world. We expect Government to help promote and conserve our built heritage, why not our livestock heritage too?

Then there is the vitally important task of maintaining genetic diversity. If UK farming is to have a secure future over the long term in the face of climate change and increased disease risks, we need to maintain the full range of genetic resources to help us respond.

RBST is working with politicians and officials across the UK to address all of these issues, ensuring that the vital role carried out by the keepers and breeders of native livestock is fully recognised.

RBST has been working to promote native breeds across the UK

Wales

In Wales RBST set out how celebrating native breeds could help support the delivery of Sustainable Land Management, a package of measures intended to address the need for Welsh agriculture to have a sustainable future:

The sheep of Wales are famous across the world for their hardiness and ability to thrive and rear lambs in almost any environment. The Welsh Mountain in all its forms provides a significant contribution to the UK lamb trade. Its regional variants such as the Torwen and Torddu have connections believed to date back to the time of St Idloes.

We also highlighted the need for Welsh Government to invest in the abattoir network:

As part of its new agriculture policy, Welsh Government should invest in ensuring that the existing network is able to meet the changing demands on it. In particular, more abattoirs need to be able to take small numbers of non-standard animals and return the fifth quarter.

Scotland

In Scotland RBST showed the role that native breeds have to play in the local a food agenda. Scottish Government's concern was with Local Food, and again RBST engaged constructively with the agenda highlighting the role that native breeds could play.:

These have the potential to be an important part of the solution to the challenges facing Scottish agriculture. Lower inputs, less environmental impact, cultural significance, localised, high welfare production are all traits that are well established and recognised. These traits could have a positive impact on meeting our biodiversity goals, lowering our agri-environmental footprint, enhancing our agritourism offering and building Scotland's reputation as a 'good food nation'

Again, we highlighted the importance of abattoir provision:

The lack of a comprehensive local abattoir network is one of the biggest challenges faced by native breed farmers seeking to provide local products to local people. ... According to Scottish Government, there are many areas of even mainland Scotland,

including parts of Caithness, Sutherland, Ross & Cromarty, Argyll and Bute, where abattoir locations involve moving animals more than 100 miles from the farm.

Finally, we emphasised the importance of greater honesty in food labelling and for consumers to sure of what they are getting:.

Consumers need to be sure that what they are buying is what it claims to be. ...Meat should only be permitted to be described as "native" or "traditional" if it is from a pedigree herd or flock ... The use of breed names should only be permitted in respect of meat from herds registered in the herd book for that breed. If the meat is from a crossbred animal, the cross breeding should be expressly referred to.

Northern Ireland

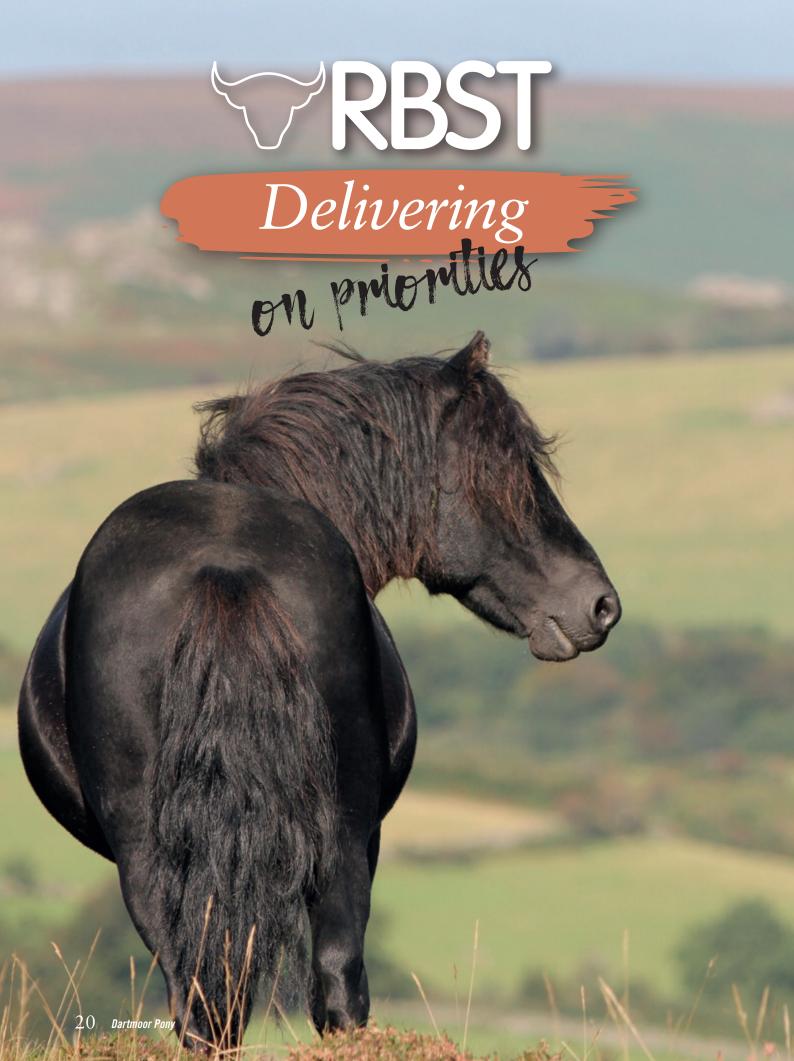

In Northern Ireland RBST fought back against proposals for shortening the life of all beef cattle to a maximum of 24 months, saying the policy would be counter-productive to Irish Government's aim of reducing greenhouse gas emissions from beef production:

We explained a 24 month limit would discourage farming with the slow-growing native cattle breeds which produce high quality beef to high environmental standards. This would in turn, thwart the consumer trend towards supporting the environment by eating less but better meat:

Breeds such as the Irish Moiled were bred for these landscapes and they bring together commercial viability with environmental value, including their fantastic support for biodiversity through conservation grazing. They are slow-growing breeds and an obligatory slaughter limit of 24 months does not suit this type of farming. If we lose our native breeds, we lose all their genetic and natural capital value too.

In a future where people are eating less but better meat, slow-grown native breeds are the obvious choice for consumers wanting high quality local produce coming from animals which have been kept to high welfare standards on minimal inputs.

A Watchlist addition in 2021

Joining the RBST Watchlist marks a call to action for a native breed in decline.

Whilst signalling serious concerns over the future of a breed, it also puts the spotlight on the breed and ensures that breed societies and breeders will have the support of RBST in their conservation efforts.

In 2021, the rare Badger Face Torwen, a Welsh Mountain sheep breed whose numbers have declined nearly 30% since 2013, was added to the Watchlist, which means the breed now benefits from focused RBST support to help its revival. RBST will work in partnership with the Badger Face Welsh Mountain Sheep Society to increase Torwen breeding numbers, prevent inbreeding, and safeguard the breed's future.

Torwen sheep have a black face with white facial markings, and a black fleece with a white belly (Torwen means 'white belly'). Their legs are tan with a black stripe, the underside of their tail is white and the rams have dark spiralled horns. Their markings are the reverse of the Badger Face Torddu breed.

The Badger Face Sheep's historic name Defaid Idloes suggests links to a 7th Century figure, Saint Idloes of Mid Wales. The majority of today's Torwen flocks are still found in Wales, but flocks have also been established in England and a small number in Scotland.

The distinctive markings of Torddu and Torwen Badger Face Sheep have been a feature of the Welsh Mountains for centuries but with numbers dwindling, action is needed to prevent Torwens from disappearing. Not only are these sheep an irreplaceable part of Britain's national heritage but, as hardy native breeds that produce delicious meat, both the Badger Face Sheep breeds should play an important role in Government's post-Brexit vision of a sustainable future for farming that works in harmony with the natural environment.

Torwens are very useful on farms and smallholdings alike thanks to their hardy nature, medium size and excellent mothering. They are good for crossing, popular in meat boxes and ideal for conservation grazing work, but they are not as well-known as their Torddu cousins. Just 491 Badger Face Torwen breeding females were registered in 2019, down from 681 in 2013.

Torwen and Torddu have previously been categorised as one breed but the Badger Face Mountain Sheep Society has traced evidence that shows the two breeds have long been bred separately, with a genetic history and inherited characteristics that clearly distinguish the two breeds. With breeding numbers having increased significantly, the Torddu is no longer categorised as rare but the Torwen is lower in number. Crosses between the Torwen and the Torddu are called a Wendu and they are not considered to represent either breed.

Delivering

The Native Poultry Project - a step towards pedigree registration

The Native Poultry Project aims to restore the numbers of the most threatened avian breeds.

The project has grown out of an initiative launched by the Marsh Daisy Society (MDS) which, in turn, built on the previous Andalusian project headed by Andrew Bowden. Seven breeds of chicken are currently involved in the project and there are plans to extend it to turkey and waterfowl breeds.

The MDS initiative, co-ordinated by breed registrar Serena Eustice, began with a Facebook census in 2020 which was returned by 39 members and established that between them, they had 460 Marsh Daisies, although it was recognised that the number of potential breeding females would present a very different picture. Recognising that the breed needed serious help, the Breed Society put together a plan with specific aims and objectives which will lead to an increase in the number of Marsh Daisies meeting the breed standard in the UK, produced by a co-ordinated breeding programme to maximise the breed's genetic diversity. This will also pioneer a system to award pedigree certificates to those birds meeting breed standard.

As RBST had piloted the project with the similarly endangered Andalusians, the MDS suggested working with RBST and others to extend the model to more poultry breeds and other avian species. RBST has

subsequently identified six more poultry breeds with breeder groups keen to engage with the project: Spanish, North Holland Blue, Norfolk Grey, Old English Pheasant Fowl and Campine.

Breeders are being selected to form a 'Breed Project Group' for each breed. These will be required to set up pens with separate cockerels and hens to introduce a clan breeding approach, which involves keeping distinct groups with no exchange between separate flocks.

Success is dependant on two key factors: identification of individual birds and record keeping. Identification is significant because administration of the project depends on being able to identify the birds involved and the breeding 'clan' to which they belong. It also reflects the need to identify the birds as being members of a 'breed at risk' in the event of an outbreak of avian flu to which the government responds by culling; there is a rebuttable presumption that breeds at risk will not be culled in such circumstances.

Record keeping will be managed via the Cloud-Lines specialist avian breed society registration system, which RBST has agreed to fund, and the project will provide a secure platform from which to ensure the survival of the breeds involved.

Watchlist 2022-23

The methodology used by RBST to prioritise breeds compares population size with measures of inbreeding and takes into account both females and males and the internationally recognised effective population calculation. RBST would like to thank Defra and UK Breed Societies for their help producing the Watchlist.

Delivering

British Lop project - genomic work complete

In 2019, RBST secured major funding from the Gerald Fallowes Discretionary Trust for a project designed to take pig genetics' conservation to a new level. In 2021, a ground-breaking element of the project came to its conclusion with the completion of a genomic characterisation study that revealed that the British Lop can be clearly defined as distinct from other pig breeds.

The project was led by Professor Georgios Banos of Scotland's Rural College (SRUC) and Dr Enrique Sanchez-Molano of the University of Edinburgh, with the support of Giles Eustice and Celia Upchurch of the British Lop Pig Society who co-ordinated the collection of hair samples for genotyping and the provision of pedigree data. The project set out to achieve three key objectives:

An assessment of the British Lop genomic population structure, including levels of genetic diversity and inbreeding.

- The calculation of the genomic relatedness of British Lops with other pig breeds.
- The identification of specific genomic (molecular) markers that uniquely characterise and distinguish the British Lop from other pig breeds.

The results of the study revealed that there is genetic diversity within the current breeding Lop population, but that levels of inbreeding and the estimated effective population size indicate that prompt measures are needed to safeguard and enhance this diversity. The study also identified genetic markers unique to the Lop which can be used to distinguish members of this breed from others.

This work demonstrates the genetic uniqueness of the British Lop pig and used modern technologies and data to derive information that may be used as a practical breed purity test and also inform breeding strategies aiming to safeguard the integrity of the breed.

Work starts on North Ronaldsay

One of the projects identified in RBST's conservation plan focuses on preserving and maintaining the genetics of the North Ronaldsay sheep breed. The first step was to take nasal pharyngeal swabs from the island's sheep population which was carried out by RBST Chairman Gail Sprake on a visit to North Ronaldsay.

Key to the success of this project is collaboration between RBST and the North Ronaldsay islanders. Although the sheep are in individual flock ownerships, decisions concerning them are made collectively by the Sheep Court, which was first created in 1839. The Court is fully engaged in the project, which has the support of the Laird, Caroline Traill Tindall, and island vet Dr Leona Robertson, who is also a member of the Sheep Court.

Funding for the project is also collaborative. In 2016

islander Billy Muir hit the national headlines when he was heralded as 'Britain's hardest working man', winning a Pride of Britain Award. Billy 'banked'

his £5,000 prize with RBST to await a suitable North Ronaldsay sheep project and it is that money, together with money from RBST's Linga Holm fund that has enabled this project to go ahead.

With the results of the study, RBST will work with the keepers to devise breeding plans to secure the island flock's long term future. The research will provide useful information on the state of the island flock and together RBST and the islanders will consider what, if anything, needs to be done to ensure that the island flock continues to thrive.

Consultancy advice and training

New consultancy service from RBST

2021 saw RBST launch a new consultancy service to support farmers and land managers wanting to keep native livestock and equines on larger holdings.

As the only organisation dedicated to the conservation, preservation, and support of our native breeds, RBST is using a combination of conservation breeding and research programmes, population monitoring, education, advocacy and grass roots practice to provide leading advice to landowners to help them achieve their ecological and commercial goals for a more regenerative farming future.

With its expertise in the selection, use and management of native livestock RBST can assist with scoping a project, based on a landowner's vision for their land and its existing features, advising on appropriate breeds and species, managing their welfare needs, registrations, any infrastructure requirements and sourcing the animals.

This expertise developed over the years since its foundation in 1973 has ensured that no native livestock breed has been lost in the intervening years. RBST is offering its consultancy service at competitive rates and all the proceeds will go towards RBST's charitable work to secure a future for the UK's native breeds.

To date projects are underway in Yorkshire, the East Midlands, the South West, Wales and Ireland.

Grazing Animals Project (GAP) courses

RBST runs two LANTRA accredited courses, Livestock Checkers and Conservation Grazing in Practice.

The Conservation Grazing in Practice course, run over two days, provides an introduction to conservation grazing and the use of livestock to achieve environmental objectives, The course covers grazing and grazing systems, different species and how they graze, animal health, welfare and behaviour, the key legislation, the different roles and responsibilities associated with livestock, health & safety and risk assessments and how to safely and effectively carry out livestock handling techniques.

The one-day livestock checkers' course provides a basic introduction to stock checking in a conservation context for beginners, volunteers or anyone with limited experience of livestock. It covers animal health and welfare, the key legislation, the role and responsibilities of a stock checker and how to safely and effectively check livestock.

A round of online meetings
with Support Groups
in early 2021 revealed
a number of younger
members keen to have their
own forum within RBST.

As RBST has long recognised that it needs to engage more with the next generation, the Board gave its support to the establishment of Young RBST, a formally constituted group for RBST members aged between 18 and 35.

The need to reach out to young people was highlighted by the fact that a membership survey carried out by RBST revealed that just 2 per cent of members are aged below 34. However, in Support Group discussions, an impressive degree of commitment was shown by the younger members taking part. It was felt, therefore, that establishing what is effectively a Support Group

structure for young members would give them what they are looking for in an extremely positive move for RBST.

To help prepare the ground, a group of 10 young members was formed, all engaged with Support Groups. Three of the prime movers at the Support Group meetings were Zoe Burn, Kelsey Ann Williamson and Tegan Dowler, who provisionally led the group. Terms of reference were established and guidelines set up for governance arrangements and Young RBST held its first AGM in the autumn, when officers were appointed.

Zoe, Tegan and Kelsey were confirmed as Chair, Vice Chair and Secretary and Vitoria Hargreaves became Treasurer with Holly Norton taking on social media. Young RBST ended the year with just over 50 members in its Facebook group and a programme of events will be held throughout each year. Virtual meetings and social media will make national membership viable and the group will also have the opportunity to meet up at major shows and RBST farm parks.

Back to the future in Scotland

RBST's Scottish Forum
held its first major event in
March which took the form
of an online conference to
promote the key attributes
of rare and native breeds.

The audience included decision makers and influencers, keepers old and new and RBST members, all interested in the critical issues facing livestock and farming in Scotland.

A total of 168 people signed up for the event to see a range of talks held during the morning culminating in a live Q&A session with all the speakers. The event was sponsored by

Ledingham Chalmers solicitors and supported by the Eriskay Pony Society.

Following a welcome by RBST VP Martin Beard, Linda Tinson, Partner at Ledingham Chalmers took the audience through the opportunities rare breeds give for diversification, and talked about some of the pitfalls people may encounter. This was followed by a talk highlighting the benefits of conservation grazing and its impact on the landscape from members James and Nikki Yoxall of Grampian Graziers. George Peart, from Promar International was up next with an excellent discussion on the genetic advantage of native breeds drawing on his degree dissertation.

There then followed a discussion on native breeds and their history as part of the land, with a particular focus on native equine breeds from RBST Farm Parks Officer Andrea Parry-Jones. Leading chef and renowned Scottish foodie Wendy Barrie from the Scottish Food Guide then told everyone why we should be eating native breed produce.

The focus then moved onto the vital question of local abattoirs and short supply chains with Flora Corbett, Mull Slaughterhouse. This was described as perhaps the most pressing issue for rare breed keepers in Scotland and was highlighted as one of the key messages in the RBST Scotland Manifesto, which was delivered by RBST CEO, Christopher Price in time for the Scottish elections.

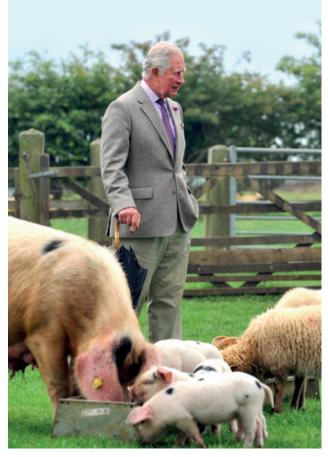

Our Patron

RBST continues to enjoy the Patronage of HRH The Prince of Wales whose decades of advocacy for British farming was recognised when he was awarded the Farmers Weekly 2020 Lifetime Achievement Award.

The award citation stated that: "In tandem with supporting great organisations including the Rare Breeds Survival Trust, he's someone who's prepared to speak up on important topics such as local food networks, village services and rural regeneration." In his response, HRH included reference to the work of RBST, saying: "The proof is in the numbers. I am told that there are now 30, 000 herds and flocks of native breeds in the UK, contributing £700 million to local economies."

Our President

Baroness (Sue) Hayman of Ullock became the latest President of RBST, taking up the reins of the role by chairing the Trust's AGM in November. She took over from farmer and TV personality Jimmy Doherty, who agreed to continue with RBST as Vice President.

A Labour Life Peer, Baroness Hayman of Ullock has sat under the title in the House of Lords since September 2020 and she is Shadow Spokesperson for Environment, Food and Rural Affairs. Sue Hayman previously served as Member of Parliament for Workington between 2015 and 2019, becoming Shadow Secretary of State for Environment, Food and Rural Affairs in 2017.

In her role as RBST President, Baroness Hayman will help make the case for securing a sustainable future for native livestock and equines in Parliament and across the wider political world.

Recognition

Recognition and positioning

Through a planned and sustained communications campaign, RBST has extended its reach across a wide range of media platforms. Total reach through media coverage for the Watchlist launch alone was estimated at more than 8 million.

RBST Watchlist Launch (April 2021)

- BBC Breakfast TV interview (average daily reach of 5.7 million)
- BBC England News online article (specific reach data not available but there are more than 20 million visits to bbc. co.uk / bbc.com each day)
- BBC Points West News online article (reach data not available)
- BBC Radio Suffolk radio interview (reach data not available)
- BBC Radio Wiltshire radio interview (reach data not available)
- BBC Radio Gloucestershire radio interview (reach data not available)
- **The Daily Telegraph** print (1,346,000 readers per day) & online (401,938 digital subscribers)
- Farmers Weekly online (766,000 web users per month) & print (circulation 38,347 per issue)
- Farmers Guardian online (168,900 web users per month) & print (circulation 28,149 per issue)
- The Scottish Farmer (print and online audience of more than 100,000 per week)
- Country Life (40,317 readers per issue)
- Horse & Hound (23,211 readers per issue)
- Your Horse magazine (reach unknown)
- **Pig World** (4,100 readership per issue)
- The Smallholder (reach unknown)

Net income/(expenditure)	487,852	(57,939)	59,370	489,283	(100,057)

Income

Total income from 2021 was £712,546 compared with £635,686 in 2020. The increase was predominantly driven by an increase in grants and donations.

Legacies are inherently difficult to forecast and have a tendency to be volatile. 2021 saw a slight decrease in legacies, however levels remain above the long term average and continues the prior reversal of the poor performance experienced in 2019.

Income from charitable activities in 2021 was £49,456 compared with £20,190 in 2020. The increase was predominantly linked to the success of RBST's newly launched consulting service, combined with a significant increase in RBST's conservation grazing GAP courses.

In line with accounting requirements, we revalue our investments at each year end. In 2021 our investments returned a net positive movement in funds of £383,886, a swing of £417,675 from the loss of £33,789 experienced in 2020. It must be remembered that this figure is simply a snap shot of our investments at a point in time and is highly dependant on the markets at that moment. RBST's ongoing budgeting and financial management uses long term averages of large volatile items such as investments and legacies to ensure the charity manages its funds appropriately.

Expenditure

Expenditure for 2021 totalled £607,149 compared with £701,954 in 2020. The decrease was driven by a reduction in charitable activities due to a reduction in spend from designated and restricted funds.

The spend on charitable activities from unrestricted funds was broadly in line with the prior year. The spend on charitable activities from designated funds decreased. Whilst there was an increase in spend on the gene bank, no other charitable spend was made from designated funds. This was a positive development as RBST ensured that projects were delivered to budget and only commenced projects once funds were in place. This negated the need for designated spend to fill unbudgeted gaps, as had been the case in the past. Spend from restricted funds was also down, which was the result of more efficient and targeted spending. RBST ensured funds were spent in accordance with the newly introduced strategic conservation plan, which targeted the most important projects for breeds most in need. This also ensured that RBST generated the greatest impact for its charitable spend, meaning more can be done to conserve those most in need. In 2021 overall restricted funds increased and RBST is continuing to work to ensure the most meaningful impact is produced for they way RBST directs both its funds and staff time.

Overall spend reduced 14%, and importantly unrestricted spend reduced 4% as management continued to closely monitor RBST's cost base. It is expected expenses will increase in 2022 as a full staff team will be in place, and the Farm Park officer post will no longer be funded by a grant from The Princes Countryside Fund. This is expected to compounded by the general rise in costs being experienced globally as a result of the rise in inflation and global supply pressures. However, it is also anticipated that spend on charitable activities will increase as RBST has replenished its restricted funds and is focused on executing high quality conservation projects in 2022.

Financial Review (continued)

Balance Sheet

The Balance Sheet remains robust and net assets have increased by 15% to £3,695,353 at the end of 2021.

The strong performance of legacies and investment gains has further increased the Trust's unrestricted funds and the Trust is well placed to withstand any future turbulence.

Whilst Covid-19 has clearly impacted the accounts over the last two years we would further reiterate the Trust's ability to withstand a period of economic turbulence. Furthermore, we would highlight the continued improvements in managing the day to day finances of the Trust, an unrestricted net income of £487,852, in what has been exceptionally challenging times demonstrates the robust position of RBST. The Staff Team and Board are working hard to secure future grants and increase fundraising, alongside seeking out alternative sources of income in 2022. There is no doubt that there will be continued challenges in 2022, particularly as inflation rises and the general economic outlook are expected to weigh on charitable giving. However, we are continuing to work hard to execute high quality meaningful conservation projects, directly aimed at securing the future of the animals we seek to conserve, whilst continuing to offer support to our members and the wider public. We remain confident we have the financial strength to survive the ongoing period of turmoil and believe we have clearly demonstrated RBST has a strong foundation from which to deliver further exciting and innovative conservation work.

Reserves policy	31 December 2021	31 December 2020	% Increase/ (Decrease)
Unrestricted funds (Free Reserves)	1,300,420	840,436	54.7%
Unrestricted funds (Tangible Fixed Assets)	104,727	119,936	-12.7%

- Other projects	22,815	11,264	102.5%
Ratio of Free Reserves to Annual Operating Expenditure	2.1 years	1.2 years	

The charity maintains a large investment portfolio in order to create an income, currently in the region of £100,000, to help fund its charitable activities.

Free reserves are shown in accordance with Charity Commission guidance CC19.

One of the prime objectives of the charity is to ensure the preservation of breeds. Therefore, a Gene Bank is maintained to ensure the characteristics of old and current breeds are conserved. This Gene Bank is treated as a heritage asset, which is irreplaceable. The Trustees have therefore designated £2million to maintain and develop the Gene Bank for the next generation.

The reserves that the Trustees have set aside provide financial stability and the means for the development of our principal activity. The Trustees' aim is for free reserves to always cover at least the annual operating expenditure.

The Trustees regularly review the amount of reserves that are required to ensure that they are adequate to fulfil our continuing obligations

Investment policy

A medium-risk approach describes the investment policy. Assets are held in the RBST Portfolio which is managed by Smith and Williamson, and which invests in a combination of segregated equities and collective funds. The portfolio targets are initial income yield of 4%; in 2021 it achieved 3.0%, which was acceptable given market conditions. The investment aim is to achieve this income target without detriment to the growth and without incurring unnecessary risk. The value of the RBST portfolio as at 31 December 2021 was £3,540,072 compared with £3,051,652 as at 31 December 2020.

Governance

Structure

RBST is a charity registered with the Charity Commission for England and Wales (Registration No. 269442). It is also a company limited by guarantee registered in England and Wales (Registration No. 01204694). It was founded in 1973. Its objects and powers are set out in its Memorandum and Articles of Association.

Trustees

The Board of RBST is comprised of unpaid trustees, with no fewer than six elected from its membership and up to five co-opted. The trustees are also the directors of RBST for the purposes of company law. The Board is responsible for setting policy, agreeing strategy and approving major commitments based on advice from senior management, and the appointment of the Chief Executive Officer. Day-to-day operations are delegated by the Board to the Chief Executive Officer, who leads the executive and volunteer teams. RBST's Memorandum and Articles of Association provide that elected trustees may be appointed for two periods of up to four years, with years being defined by AGMs, at a time and must then take a minimum break of 24 months. Co-opted trustees may be appointed for two periods of up to three years, with years being defined by AGMs, at a time and must then take a minimum break of 24 months. The Board has two principal committees: the Conservation and Research Committee and Governance Committee. Membership of these committees along with a full list of trustees and staff at the time of writing of this report are provided at the end of this report. The Conservation and Research Committee advises the Board of trustees on strategic issues concerning conservation programmes and related activities. The Finance and Governance Committee is responsible for reviewing RBST's financial performance and matters relating to management, organisation, governance, investments and risk management. Each new trustee is provided with training and an induction, where s/he learns about the organisation and the role and responsibilities of a trustee. The induction includes a pack containing the Charity Commission guidance 'The Essential Trustee'; RBST's governing documents; and the most recent annual report and financial statements. Trustees receive ongoing training, receive charity law updates, and are involved in strategic sessions relating to the operations during the year.

Statement of Trustees' responsibilities

The trustees (who are also directors of RBST for the purposes of company law) are responsible for preparing the trustees' Annual Report and the financial statements in accordance with applicable law and United Kingdom generally accepted accounting practice (United Kingdom Accounting Standards). Company law requires the trustees to prepare financial statements for each financial year. Under company law the trustees must not approve the financial statements unless they are satisfied that they give a true and fair view of the state of affairs of the charitable company and the group and of the incoming resources and application of resources, including the income and expenditure, of the charitable company for that period. In preparing these financial statements, the trustees are required to:

- select suitable accounting policies and then apply them consistently;
- observe the methods and principles in the Charities SORP 2019 (FRS 102);
- make judgments and estimates that are reasonable and prudent;
- state whether applicable UK accounting standards have been followed, subject to any material departures disclosed and explained in the financial statements; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the charitable company will continue in business.

The trustees are responsible for keeping adequate accounting records that are sufficient to show and explain the charitable company's transactions, disclose with reasonable accuracy at any time the financial position of the charitable company and enable them to ensure that the financial statements comply with the Companies Act 2006, and the provisions of the Charity's constitution. They are also responsible for safeguarding the assets of the charity and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

In so far as the trustees are aware:

- there is no relevant audit information of which the charitable company's auditor is unaware; and
- the trustees have taken all reasonable steps that they ought to have taken to make themselves aware of any relevant audit information and to establish that the auditor is aware of that information. The trustees are also responsible for the maintenance and integrity of the corporate and financial information included on the charitable company's website.

Legislation in the United Kingdom governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

Governance (continued)

Grant making policy

RBST occasionally makes donations or grants, in line with its charitable and strategic objectives, to partners in the RBST network, the outcomes of which are reviewed at regular periods.

Public benefit

In reviewing our charitable objectives and as part of planning our future programme of work, the trustees of RBST have taken account of the Charity Commission's guidance on public benefit and have considered how the planned programme of work will consistently contribute to the Charity's aims and objectives.

Remuneration policy

Our approach to remuneration across the organisation is designed to ensure we can attract and retain the talented and motivated people we need to deliver our mission.

Fundraising Regulator Statement of Compliance

The charity does not contract with a third party to undertake any fundraising on its behalf. The charity does employ a fundraising officer who initiates campaigns and supports fundraising activities.

The charity only makes fundraising approaches to contacts who have given explicit consent to receive such campaign documentation under GDPR guidelines. We have received no fundraising complaints during the year.

Risk management

The trustees have reviewed the major risks to which the charity is exposed and confirm that systems have been established to mitigate those risks. Particular attention has focused on Support Groups and the review of the risk register was rolled over due to covid and competing commitments, though most of the key issues that would be expected in a risk register have been addressed.

Trustees Indemnity

The charity has Trustees' indemnity insurance in place.

Our employees & volunteers

The delivery of our mission relies on our talented and motivated people, and we are proud of the performance of our staff and volunteers across the UK. The trustees and Chief Executive Officer encourage widespread consultation and exchange of information at all levels of the organisation and we continue to work together on a range of actions to improve employee and volunteer engagement, ensuring that RBST remains a great place to work and volunteer.

Diversity, Equity & Inclusion

The trustees are committed to addressing equality, diversity and inclusion, recognising that doing so helps a board to make better decisions and means RBST is more likely to stay relevant to those it serves and to deliver its public benefit. Trustees will work to recognise and counter any imbalances in power, perspectives or opportunities in RBST, and in the attitudes and behaviour of trustees, staff and volunteers, so helping to make sure RBST achieves its aims.

The trustees' report (including the directors' report) was approved by the Board of trustees on xxxxxxxxxx and was signed on their behalf by:

Independent Auditors Report

Year Ended 31 December 2021

Opinion

We have audited the financial statements of the Rare Breeds Survival Trust (the 'charitable company') for the year ended 31 December 2021 which comprise the Statement of Financial Activities, Balance Sheet, Statement of Cashflows and notes to the financial statements, including a summary of significant accounting policies. The financial reporting framework that has been applied in their preparation is applicable law and United Kingdom Accounting Standards, including Financial Reporting Standard 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland (United Kingdom Generally Accepted Accounting Practice).

In our opinion the financial statements:

- give a true and fair view of the state of the charitable company's affairs as at 31 December 2021, and of its incoming resources and application of resources, including its income and expenditure, for the year then ended;
- have been properly prepared in accordance with United Kingdom Generally Accepted Accounting Practice; and
- have been prepared in accordance with the requirements of the Companies Act 2006.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (UK) (ISAs (UK)) and applicable law. Our responsibilities under those standards are further described in the Auditor's responsibilities for the audit of the financial statements section of our report. We are independent of the charitable company in accordance with the ethical requirements that are relevant to our audit of the financial statements in the UK, including the FRC's Ethical Standard, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Conclusions relating to going concern

In auditing the financial statements, we have concluded that the trustees' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the charitable company's ability to continue as a going concern for a period of at least twelve months from when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the trustees with respect to going concern are described in the relevant sections of this report.

Other information

The trustees are responsible for the other information. The other information comprises the information included in the trustees' annual report, other than the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility

is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

Opinions on other matters prescribed by the Companies Act 2006

In our opinion, based on the work undertaken in the course of the audit:

- the information given in the trustees' report (incorporating the directors' report) for the financial year for which the financial statements are prepared is consistent with the financial statements; and
- the directors' report has been prepared in accordance with applicable legal requirements.

Matters on which we are required to report by exception

In the light of our knowledge and understanding of the charitable company and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

We have nothing to report in respect of the following matters in relation to which the Companies Act 2006 requires us to report to you if, in our opinion:

- adequate accounting records have not been kept, or returns adequate for our audit have not been received from branches not visited by us; or
- the financial statements are not in agreement with the accounting records and returns; or
- certain disclosures of directors' remuneration specified by law are not made; or
- we have not received all the information and explanations we require for our audit: or
- the trustees were not entitled to prepare the financial statements in accordance with the small companies' regime and take advantage of the small companies' exemptions in preparing the directors' report and from the requirement to prepare a strategic report.

Responsibilities of trustees

As explained more fully in the trustees' responsibilities statement set out on page 33, the trustees (who are also the directors of the charitable company for the purposes of company law) are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view, and for such internal control as the trustees determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the trustees are responsible for assessing the charitable company's ability to continue as a going concern,

Independent Auditors Report (continued)

disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the trustees either intend to liquidate the charitable company or to cease operations, or have no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (UK) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

Irregularities, including fraud, are instances of non-compliance with laws and regulations. We design procedures in line with our responsibilities, outlined above, to detect material misstatements in respect of irregularities, including fraud. The specific procedures for this engagement and the extent to which these are capable of detecting irregularities, including fraud is detailed below:

- Enquiry of management, those charged with governance around actual and potential litigation and claims;
- Enquiry of entity staff in compliance functions to identify any instances of non-compliance with laws and regulations;
- Reviewing minutes of meetings of those charged with governance;
- Reviewing financial statement disclosures and testing to supporting documentation to assess compliance with applicable laws and regulations.
- Performing audit work over the risk of management override of controls, including testing of journal entries and other adjustments for appropriateness, evaluating the business rationale of significant transactions outside the normal course of business and reviewing accounting estimates for bias.

Because of the inherent limitations of an audit, there is a risk that we will not detect all irregularities, including those leading to a material misstatement in the financial statements or non-compliance with regulation. This risk increases the more that compliance with a law or regulation is removed from the events and transactions reflected in the financial statements, as we will be less likely to become aware of instances of non-compliance. The risk is also greater regarding irregularities occurring due to fraud rather than error, as fraud involves intentional concealment, forgery, collusion, omission or misrepresentation.

As part of an audit in accordance with ISAs (UK), we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

 Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the charitable company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the trustees.
- Conclude on the appropriateness of the trustees' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the charitable company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the charitable company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Use of our report

This report is made solely to the charitable company's members, as a body, in accordance with Chapter 3 of Part 16 of the Companies Act 2006. Our audit work has been undertaken so that we might state to the charitable company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the charitable company and the charitable company's members as a body, for our audit work, for this report, or for the opinions we have formed.

Notes to the financial statements

Year Ended 31 December 2021

1 Summary of significant accounting policies

(a) General information and basis of preparation

Rare Breeds Survival Trust is an incorporated charity registered in England. In the event of the charity being wound up, the liability in respect of the guarantee is limited to £1 per member of the charity. The address of the registered office is Avenue Q, Stoneleigh Park, Kenilworth, Warwickshire, CV8 2LG. The nature of the charity's operations and principal activities are:

- For the benefit of the public to ensure the preservation of breeds and breeding groups of domestic farm livestock of importance in the promotion of agriculture being breeds at risk, and having characteristics worthy of preservation in the interests of zoological research and education to ensure the preservation of genes of special or potential value in hybridisation or other work; and
- To conduct, carry out and promote research within all areas of the Trust's interest to increase knowledge and to publish the results of such research.

The charity constitutes a public benefit entity as defined by FRS 102. The financial statements have been prepared in accordance with Accounting and Reporting by Charities: Statement of Recommended Practice applicable to charities preparing their accounts in accordance with the Financial Reporting Standard applicable in the UK and Republic of Ireland issued in October 2019, the Financial Reporting Standard applicable in the United Kingdom and Republic of Ireland (FRS 102), the Charities Act 2011, the Companies Act 2006 and UK Generally Accepted Accounting Practice.

The financial statements are prepared on a going concern basis under the historical cost convention, modified to include certain items at fair value. The financial statements are presented in sterling which is the functional currency of the charity and rounded to the nearest $\mathfrak{L}1$.

The significant accounting policies applied in the preparation of these financial statements are set out below. These policies have been consistently applied to all years presented unless otherwise stated.

A network of volunteer support groups is constituted within the Trust and accordingly the accounts include their financial activities.

(b) Funds

Unrestricted funds are available for use at the discretion of the trustees in furtherance of the general objectives of the charity and which have not been designated for other purposes. Designated funds comprise unrestricted funds that have been set aside by the trustees for particular purposes. The aim and use of each designated fund is set out in the notes to the financial statements. The cost of raising and administering such funds is charged against the specific fund. The aim and use of each restricted fund is set out in the notes to the financial statements.

(c) Income recognition

All incoming resources are included in the Statement of Financial Activities (SoFA) when the charity is legally entitled to the income after any performance conditions have been met, the amount can be measured reliably, and it is probable that the income will be received.

Subscriptions are included in the Income and Expenditure Account in the accounting period in which they are received.

This treatment is also adopted for the limited number of subscriptions received from new life members.

For donations to be recognised the charity will have been notified of the amounts and the settlement date in writing. If there are conditions attached to the donation and this requires a level of performance before entitlement can be obtained then income is deferred until those conditions are fully met or the fulfilment of those conditions is within the control of the charity and it is probable that they will be fulfilled.

Donated facilities and donated professional services are recognised in income at their fair value when their economic benefit is probable, it can be measured reliably and the charity has control over the item. Fair value is determined on the basis of the value of the gift to the charity, for example the amount the charity would be willing to pay in the open market for such facilities and services. A corresponding amount is recognised in expenditure.

No amount is included in the financial statements for volunteer time in line with the SORP (FRS 102). Further detail is given in the Trustees' Annual Report.

For legacies, entitlement is the earlier of the charity being notified of an impending distribution or the legacy being received. At this point income is recognised. On occasion legacies will be notified to the charity for which it is not possible to measure the amount expected to be distributed. On these occasions, the legacy is treated as a contingent asset and disclosed.

Income from trading activities includes income earned from fundraising events and trading activities to raise funds for the charity. Income is received in exchange for supplying goods and services in order to raise funds and is recognised when entitlement has occurred.

Investment income is earned through holding assets for investment purposes such as shares and property. It includes dividends, interest and rent. Where it is not practicable to identify investment management costs incurred within a scheme with reasonable accuracy the investment income is reported net of these costs. It is included when the amount can be measured reliably. Interest income is recognised using the effective interest method and dividend and rent income is recognised as the charity's right to receive payment is established.

(d) Expenditure recognition

All expenditure is accounted for on an accruals basis and has been classified under headings that aggregate all costs related to the category. Expenditure is recognised where there is a legal or constructive obligation to make payments to third parties, it is probable that the settlement will be required and the amount of the obligation can be measured reliably. It is categorised under the following headings:

- · Costs of raising funds includes fundraising and non-charitable trading activities;
- Expenditure on charitable activities includes costs of services and of grants, also support costs and depreciation on related assets; and
- Other expenditure represents those items not falling into the categories above.

Irrecoverable VAT is charged as an expense against the activity for which expenditure arose.

(e) Support costs allocation

Support costs are those that assist the work of the charity but do not directly represent charitable activities and include office costs, governance costs, and administrative payroll costs. They are incurred directly in support of expenditure on the objects of the charity and include project management carried out at Headquarters. All support costs have been allocated on the basis of number of employees. Fund-raising costs are those incurred in seeking voluntary contributions and do not include the costs of disseminating information in support of the charitable activities.

The analysis of these costs is included in note 7.

Year Ended 31 December 2021

(f) Tangible fixed assets

Tangible fixed assets are stated at cost (or deemed cost) or valuation less accumulated depreciation and accumulated impairment losses. Cost includes costs directly attributable to making the asset capable of operating as intended. Depreciation is provided on all tangible fixed assets, at rates calculated to write off the cost, less estimated residual value, of each asset on a systematic basis over its expected useful life as follows:

Leasehold land and buildings
Over the period of the lease

Office and Computer Equipment 10%-33% according to the nature of the asset

Conservation Breeding Stock (agisted) Annual Revaluation

(g) Heritage assets

The Gene Bank is a collection of semen and embryos obtained from rare breeds of cattle, horses, sheep, goats and pigs. It acts as an archive to preserve bloodlines of breeds. Each year additions are made to the archive to ensure that it includes the current characteristics of a breed. The archive is regarded as an irreplaceable resource which cannot be valued with any degree of accuracy and will never be sold. As such it generates no income and so has no realisable value. Therefore it does not have a carrying value in the balance sheet. The costs incurred in maintaining the archive for conservation purposes are written off each year.

(h) Investments

Investments are recognised initially at fair value which is normally the transaction price excluding transaction costs. Subsequently, they are measured at fair value with changes recognised in 'net gains / (losses) on investments' in the SoFA if the shares are publicly traded or their fair value can otherwise be measured reliably. Other investments are measured at cost less impairment.

(i) Stocks

Stocks comprise genetic resources, which are not part of the Gene Bank, and goods for resale. Genetic resources are valued at the lower of cost of production and market value. Retail stocks are valued at the lower of cost and net realisable value.

(j) Debtors and creditors receivable / payable within one year

Debtors and creditors with no stated interest rate and receivable or payable within one year are recorded at transaction price. Any losses arising from impairment are recognised in expenditure.

(k) Impairment

Assets not measured at fair value are reviewed for any indication that the asset may be impaired at each balance sheet date. If such indication exists, the recoverable amount of the asset, or the asset's cash generating unit, is estimated and compared to the carrying amount. Where the carrying amount exceeds its recoverable amount, an impairment loss is recognised in profit or loss unless the asset is carried at a revalued amount where the impairment loss is a revaluation decrease.

(I) Leases

Assets acquired under finance leases are capitalised and depreciated over the shorter of the lease term and the expected useful life of the asset. Minimum lease payments are apportioned between the finance charge and the reduction of the outstanding lease liability using the effective interest method. The related obligations, net of future finance charges, are included in creditors.

Rentals payable and receivable under operating leases are charged to the SoFA on a straight-line basis over the period of the lease.

(m) Employee benefits

When employees have rendered service to the charity, short-term employee benefits to which the employees are entitled are recognised at the undiscounted amount expected to be paid in exchange for that service. The charity operates a defined contribution pension plan for the benefit of its employees. Contributions are expensed as they become payable. The Trust agrees to pay a defined contribution into the employee's own personal pension scheme for eligible employees. The pension charge represents contributions payable by the Trust for the period. The Trust's liability is limited to the amount of the contribution. The liability for meeting future pension payments rests solely with the employee's personal pension scheme.

(n) Tax

The charity is an exempt charity within the meaning of schedule 3 of the Charities Act 2011 and is considered to pass the tests set out in Paragraph 1 Schedule 6 Finance Act 2010 and therefore it meets the definition of a charitable company for UK corporation tax purposes.

(o) Financial instruments

The Trust enters into only basic financial instrument transactions that result in the recognition of financial assets and liabilities like trade and other amounts receivable and payable and loans to related parties. Basic financial instruments are initially recognised at transaction value and subsequently measured at their settlement value with the exception of bank loans which are subsequently measured at amortised cost using the effective interest method.

(p) Going concern

The financial statements have been prepared on a going concern basis as the trustees believe that no material uncertainties exist. The trustees have considered the level of funds held and the expected level of income and expenditure for 12 months from authorising these financial statements. The budgeted income and expenditure is sufficient with the level of reserves for the charity to be able to continue as a going concern.

2 Income from donations and legacies

	2021	2020
	£	£
s and donations	162,884	87,713
es	211,135	243,443

Unrestricted funds description

20

Unrestricted funds are those funds available for use, at the discretion of the Trustees, in furtherance of the general objectives of the charity and which have not been designated for other purposes.

Designated funds description

The archive Gene Bank is held to maintain the Heritage Assets for the benefit of the next generation.

The Conservation Breeding Stock (Agisted), reserve is the value of RBST rare breed stock on loan to livestock keepers to increase rare breed population numbers.

The Linga Holm Fund derives from the sale of certain assets in 2000. It is available for the conservation of North Ronaldsay sheep in the first instance.

Sandringham Charitable Trust was created from legacies received for the pursuance of conservation projects.

The Property improvement fund relates to the proposed refurbishment of the premises at Stoneleigh Park.

The Lop Fund was created to help support the work in regard to British Lop pigs, along with the donation received from the Gerald Fallowes Discretionary Trust.

Restricted funds and Trusts

We are extremely grateful to the charitable trusts and foundations that support our work. Some trusts provide general funding, while others prefer to sponsor specific projects as detailed on page 50.

22 Pensions and other post-retirement benefits

Defined contribution pension plans

The charity operates a defined contribution pension plan for its employees. The amount recognised as an expense in the period was £12,638 (2020 - £11,775).

The defined contribution liability is allocated to unrestricted funds being raising funds £38 and conservation activities £62.

Leaving a gift in your Will could be the greatest difference you ever make!

Planning for the future

RBST depends heavily on voluntary donations. Without the incredible generosity of our members and supporters, we simply couldn't continue our vital work in research, conservation and saving rare breeds. We know that with the help of generous donors like you, RBST can continue striving to achieve its crucial goal, to ensure that the genetic diversity represented by our native breeds is safeguarded for many years to come. Our vision is a secure future for each of the UK's native breeds of livestock to ensure long-term food security, the conservation of important habitats and landscapes and the preservation of the UK's culture. Help ensure our native farm animals have a secure future and can be enjoyed by generations to come.

What to do?

If you have already made a Will but you are considering including a gift to RBST, your solicitor will advise you on the correct wording to update your Will. You will need to provide your solicitor with our charity details. For your convenience, we have provided this here:

The Rare Breeds Survival Trust, Stoneleigh Park, Kenilworth, Warwickshire, CV8 2LG. (Registered Charity no. 269442).

Please also state that you wish to make the gift for the 'general purposes' of Rare Breeds Survival Trust.

Our promise

RBST will always respect your privacy. Your information will be handled with the utmost confidentiality and we will never ask the amount of your legacy. We understand and respect that you will want to remember family and friends first when planning for the future, but we hope that once you've taken care of your loved ones, you'll consider leaving a legacy gift in your Will, as a lasting way to support the future of RBST.

No Will yet?

Have you thought about leaving a gift in your Will to RBST? This year we have partnered with Free Wills Month. They bring together a group of well-respected charities to offer members of the public aged 55 and over, giving you the opportunity to support RBST and have a simple Will written or updated for free, by using one of their participating solicitors. The next campaign opens on 1st October 2021, you can register your interest here **www.freewillsmonth.org.uk/** and receive an email reminding you that the campaign has started. An up-to-date Will written by a solicitor ensures your wishes are respected. It also avoids difficult decisions and legal complications for your loved ones.

If you have any questions, visit our website, call 02476 69551 or email fundraising@rbst.org.uk.

RBST is incredibly grateful for every single penny donated to its cause by members, donors and supporters, both individuals and organisations. RBST simply would not exist without their generosity.

Whilst we would like to be able to thank everyone by name, due to space and data protection limitations this is not possible.

We would however like to take the opportunity to make special reference to the Trusts who donated funds to RBST in 2021 and all those who so kindly remembered RBST in their Wills.
